

**Amendments to the Claims:**

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A spread illuminating apparatus for illuminating two objects, the apparatus comprising:

at least one light source;

a light conductive plate having the at least one light source provided at one end surface thereof and adapted to allow light emitted from the at least one light source and introduced therein to exit out therefrom through two major surfaces thereof respectively toward a first liquid crystal display element which constitutes one of two objects to be illuminated, and which is disposed over one of the two major surfaces of the light conductive plate, and toward a second liquid crystal display element which constitutes the other of the two objects to be illuminated, has a smaller display screen size than the first liquid crystal display element, and which is partially disposed over the other of the two major surfaces of the light conductive plate, the second liquid crystal display element covering one area, but not covering another area, of the other of the two major surfaces of the light conductive plate; and

a ~~reflecting means~~ reflector plate, reflecting light toward the first liquid crystal display element, partially disposed at the other major surface of the light conductive plate having the second liquid crystal display element, the reflector plate covering an area of the other of the two major surfaces that is so as to cover at least areas not covered by the second liquid crystal display element, the reflecting means being adapted to reflect light the reflector plate not covering an area of the other of the two major surfaces that is covered by the second liquid crystal display element, toward the first liquid crystal display element.

2-4. (Canceled)

5. (Currently Amended) ~~A spread illuminating apparatus according to Claim 1,~~  
~~wherein the reflecting means consists of:~~ A spread illuminating apparatus for illuminating  
two objects, the apparatus comprising:  
\_\_\_\_\_ at least one light source;  
\_\_\_\_\_ a light conductive plate having the at least one light source provided at one end  
surface thereof and adapted to allow light emitted from the at least one light source and  
introduced therein to exit out therefrom through two major surfaces thereof respectively  
toward a first liquid crystal display element which constitutes one of two objects to be  
illuminated, and which is disposed over one of the two major surfaces of the light conductive  
plate, and toward a second liquid crystal display element which constitutes the other of the  
two objects to be illuminated, has a smaller display screen size than the first liquid crystal  
display element, and which is partially disposed over the other of the two major surfaces of  
the light conductive plate, the second liquid crystal display element covering one area, but not  
covering another area, of the other of the two major surfaces of the light conductive plate; and  
\_\_\_\_\_ a reflector plate partially provided so as to cover the area an area of the other  
of the two major surfaces that is not covered by the second liquid crystal display element, the  
reflector plate not covering an area of the other of the two major surfaces that is covered by  
the second liquid crystal display element; and  
\_\_\_\_\_ a reflective polarizer plate which reflects P-polarized light and transmits  
S-polarized light selectively, or vice versa, and which is provided so as to cover entirely the  
other major surface of the light conductive plate having the second liquid crystal display  
element.

6. (Currently Amended) A spread illuminating apparatus according to  
~~Claim 2~~ Claim 1 wherein the reflector plate has its reflectance matched with reflectance of the  
second liquid crystal display ~~panel~~ element.

7. (Currently Amended) A spread illuminating apparatus according to Claim 2 wherein the ~~reflecting means~~reflector plate has its reflectance gradually varying at a given area close to the second liquid crystal display element.

8. (Canceled)

9. (Currently Amended) ~~A spread illuminating apparatus according to Claim 1, wherein the reflecting means consists of:~~ A spread illuminating apparatus for illuminating two objects, the apparatus comprising:

\_\_\_\_\_ at least one light source;  
\_\_\_\_\_ a light conductive plate having the at least one light source provided at one end surface thereof and adapted to allow light emitted from the at least one light source and introduced therein to exit out therefrom through two major surfaces thereof respectively toward a first liquid crystal display element which constitutes one of two objects to be illuminated, and which is disposed over one of the two major surfaces of the light conductive plate, and toward a second liquid crystal display element which constitutes the other of the two objects to be illuminated, has a smaller display screen size than the first liquid crystal display element, and which is partially disposed over the other of the two major surfaces of the light conductive plate, the second liquid crystal display element covering one area, but not covering another area, of the other of the two major surfaces of the light conductive plate; and  
\_\_\_\_\_ a reflector plate partially provided so as to cover ~~the areas~~ an area of the other of the two major surfaces that is not covered by the second liquid crystal display element, the reflector plate not covering an area of the other of the two major surfaces that is covered by the second liquid crystal display element, and  
\_\_\_\_\_ a reflective polarizer plate which reflects P-polarized light and transmits S-polarized light selectively, or vice versa, and which is provided entirely at and in direct

contact with the other major surface of the light conductive plate having the second liquid crystal display element.

10. (Currently Amended) A spread illuminating apparatus according to Claim 5 wherein the reflector plate has its reflectance matched with reflectance of the second liquid crystal display ~~pane~~element.

11. (Currently Amended) A spread illuminating apparatus according to Claim 5 wherein the ~~reflecting means~~reflector plate has its reflectance gradually varying at a given area close to the second liquid crystal display element.

12. (Currently Amended) A spread illuminating apparatus according to Claim 6 wherein the ~~reflecting means~~reflector plate has its reflectance gradually varying at a given area close to the second liquid crystal display element.

13. (New) A spread illuminating apparatus according to Claim 9 wherein the reflector plate has its reflectance matched with reflectance of the second liquid crystal display element.

14. (New) A spread illuminating apparatus according to Claim 9 wherein the reflecting means has its reflectance gradually varying at a given area close to the second liquid crystal display element.
